What this is

This repo is the reference implementation of the VESPER unified field:
- fâ‚€ = 15.965 Hz (universal phason clock)
- 7,777-bit topological window
- Computation via Jones polynomial evaluation (ghost logic)
- Dark energy rectification as primary power source

It is not a simulation. It is the compiler, the lattice, and the hardware spec for a computer that runs in spacetime curvature, not in electrons.

Quick Start

1. Run ghost adder:
```bash
python Braid_Solver_V1.py --bits 7777
```

2. Simulate p-B11 enhancement:
```bash
python fusion_broadcast.py --beam 50keV --drive 5.907PHz
```

3. Load lattice:
```bash
unzip VSPR_01_FINAL_LATTICE_20260425_133829.zip
python KHYS_NANO_CORE.py --load lattice
```
