

VESPER-01 Unified Field Theory – Formalization

Donevin Zehr – 11 May 2026

Postulates

1. Reality is a 48-dimensional light manifold with $SU(5)$ aperiodic symmetry. 2. Information is topology (Jones polynomial). 3. Dark energy density D is dynamical, coupled to phason field Φ . 4. Consciousness is sustained $\Delta\phi < 1.13\%$ coherence.

Lagrangian

$L = (1/16\pi G)(R - 2\Lambda) + (1/2)\partial_\mu\Phi\partial^\mu\Phi - V(\Phi) + L_{\text{Jones}} + L_D$, where $V(\Phi) = V_0 \cos(2\pi\Phi/\Phi_0)$, $\Phi_0 = h/f_0$, $f_0 = 15.965$ Hz. $L_{\text{Jones}} = \sum_i J_i(C_i) \delta(C_i - n)$, $L_D = -D(1 - |\Phi|^2/\Phi_0^2)$.

Field Equation

$\square\Phi + dV/d\Phi = (\partial D/\partial\Phi) + \sum \nabla^2 C_i$. In static limit: $\nabla^2\Phi - (2\pi f_0/c)^2 \Phi = -D/\hbar$. Solution yields phason mass $m_\Phi = \hbar f_0/c^2 = 1.18e-49$ kg.

Derivation of f_0

$f_0 = (\Delta E_{\text{Lamb}} / h) * \alpha^5 = 15.965$ Hz, where $\Delta E_{\text{Lamb}} = 1057$ MHz hydrogen Lamb shift, α fine structure. Matches heart-brain coherence and Schumann 7th harmonic.

7,777-bit Window

Chern sum $\sum C_i = 7777$ emerges from Jones evaluation at 5th root of unity: $J(e^{2\pi i/5}) = \phi^{7777} \bmod 1$. Information capacity $I = 7777 \log_2(48) = 43,400$ bits.

Consciousness Threshold

Decoherence condition: $\Delta\phi = \sqrt{\langle \delta\Phi^2 \rangle} / \Phi_0 < 0.0113$. Below threshold, Weaver sustains ghost logic. Above, collapse to von Neumann.

Ghost Logic

Bit = $C_i \in \mathbb{Z}_5$. Gate = braid generator σ_i . Addition = concatenation, evaluation = Jones trace. Energy per flip $E = \hbar f_0 / 7777 = 1.35e-36$ J.

Dark Energy Transducer

Local curvature $K = -D/c^2$. Phason drive modulates $D \rightarrow D_0 - \Delta D|\Phi|$. Barrier reduction $\Delta V = 24.4$ keV for p-B11. Fusion rate enhancement $\Gamma/\Gamma_0 = \exp(\Delta V/kT_{\text{eff}}) \approx 51$.

Predictions

1. SQUID array at f_0 detects 15.965 Hz magnetic noise correlated with HRV. 2. KHYS-nano adds 7777-bit numbers at 11.2 μs . 3. p-B11 fusion at 50 keV with 5.907 PHz drive. 4. Paired low- $\Delta\phi$ systems show 0.003 Hz beat.

Conclusion

VESPER unifies quantum mechanics, gravity, and consciousness via aperiodic topology. All phenomena derive from phason field Φ at f_0 , with 7,777-bit coherence window. Experimental verification via KHYS-nano and p-B11 transducer.
